BEC701 - FIBRE OPTIC COMMUNICATION

- An optical Fiber is a thin, flexible, transparent Fiber that acts as a waveguide, or "light pipe", to transmit light between the two ends of the Fiber • Optical fibers are widely used in Fiber-optic communications, which permits transmission over longer distances and at higher bandwidths (data rates) than other forms of communication

FIBER OPTICS - School of Physics

An optical fiber is a cylindrical dielectric waveguide made of low-loss materials such as silica glass It has a central core in which the light is guided, embedded in an outer cladding of slightly lower refractive index (Fig 80-1) Light rays incident on the core-cladding boundary at angles greater than

the critical angle undergo total internal reflection and are guided through the core
